Water**

Trusted to serve Scotland

Taking care of your waste water network

Why are we doing this?

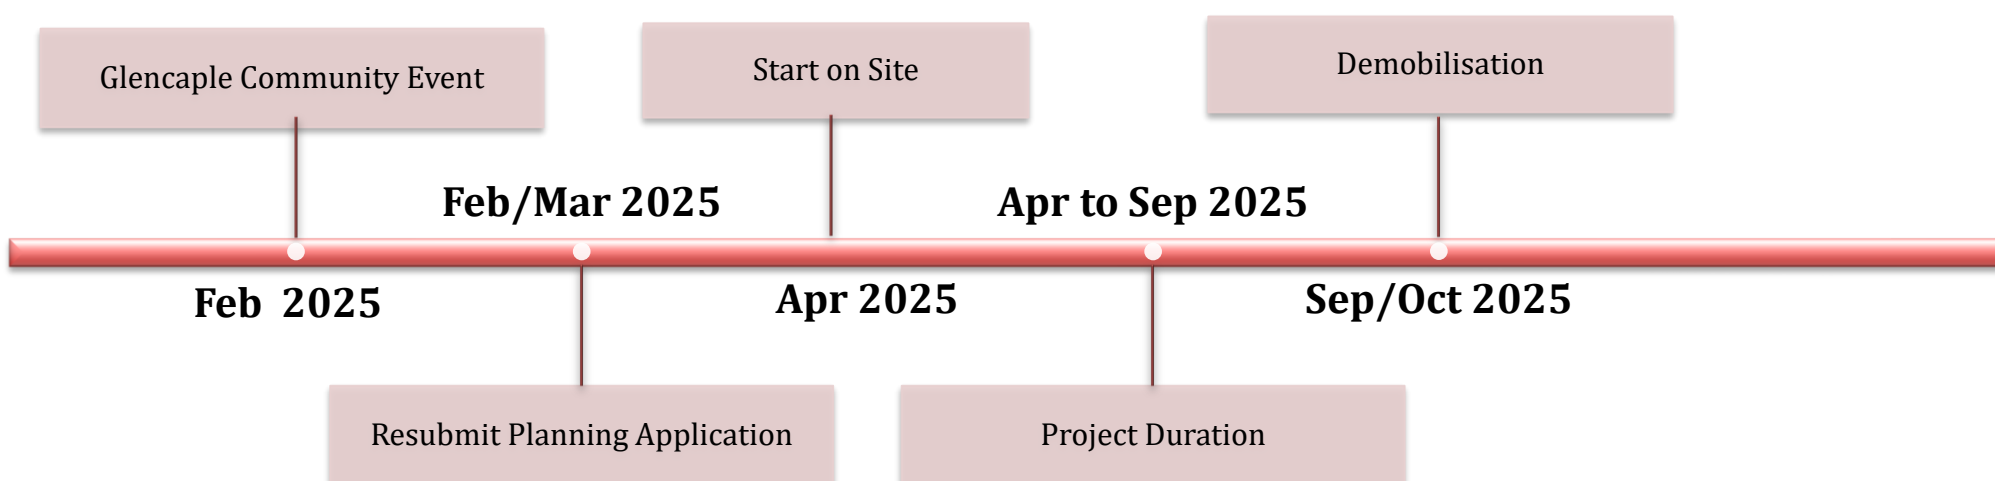

The existing septic tank has served the community well but is now nearing the end of serviceable life, creating increased risk of service failures.

The proposed investment is essential to ensure that our existing customers within Glencaple Village continue to be served by a resilient futureproof sewer network, while also providing critical maintenance of the asset and enhancement of the area. It will also the already occupied developments within the village to connect to a reliable sewer network, supporting economic growth as set out in the Village Design Statement.

Careful consideration has been given to ensuring that the levels of our buried infrastructure do not exceed the height of the existing septic tank area, impacting scenic opportunities. This, along with our objective to treat the rock armour with a sympathetic design solution, should hopefully alleviate concerns that there would be any detrimental impact to the National Scenic Area and the Quay.

The planned improvements will ensure Scottish Water compliance with requirements of the environmental regulations and that customers continue to enjoy a great Scottish Water service.
